Economic Indicators

(as on June 30, 2026)

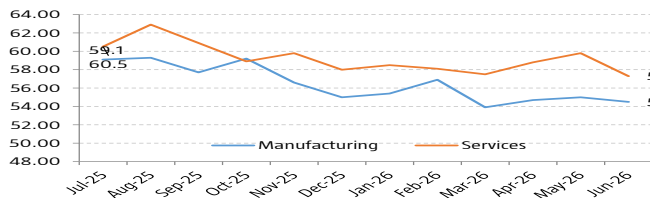

Inflation in India (%)

Consumer Price Index increased to a 16-month high of 3.93% in May'26 from 3.48% in Apr'26, primarily driven up by increase in food prices. It is believed that rising global crude oil prices and geopolitical uncertainties in May'26 impacted inflation trends if tensions persist internationally. Wholesale Price Index (WPI) increased sharply to 9.68% in May'26 from 8.3% in Apr'26 with fuel and power prices surging more than 30%.

Indian Business Indicators - Purchasing Managers' Index (PMI)

S&P Global India Manufacturing Purchasing Managers' Index (PMI) declined to 54.5 in May'26 from 55 in May'26 as growth in output and new orders slowed to among the weakest rates in four years, while export orders rose at the softest pace since Mar'23 amid subdued demand from some European markets. PMI Services also decreased to 57.3 in Jun'26 from 58.9 in May'26 due to a slower increase in output, while new order growth eased to its slowest pace in over two and a half years. The reading remains in the expansion zone, as a score above 50 indicates expansion, while a score below 50 denotes contraction.

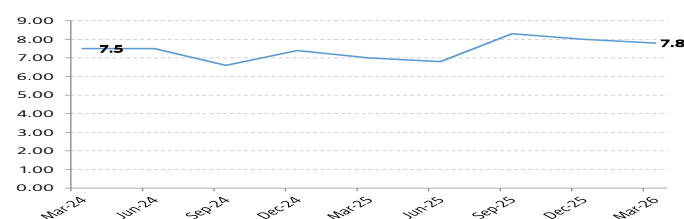

Equity Markets - India & US

Bellwether indices, Nifty 50 and BSE Sensex increased drastically during the month by 1.35% and 2.28% respectively supported by easing geopolitical tensions and increasing optimism surrounding a potential U.S.-India bilateral trade agreement. The rally was further fuelled by a decline in global crude oil prices following the U.S. President's announcement of a tentative peace deal with Iran, easing investor concerns over inflation and boosting sentiment. Foreign Institutional Investors (FIIs) were net sellers in Indian equities to the tune of ₹ 49341.32 crore. Net Goods and Services Tax (GST) collections in Jun'26 stood at Rs. 1.95 trillion, representing a 13.9% rise on a yearly basis due to robust revenue from imports. Dow Jones increased by 2.52% from previous month.

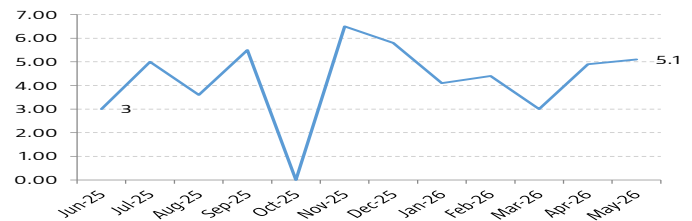

India GDP Growth Rate

India's GDP grew 7.8% for Q4 FY26 vs 8% for Q3 FY26 as robust private investment, farm output and construction activity offset the early impact of the Middle East conflict. In the Jan-Mar quarter of last year, the GDP growth rate was 7.0%. On the sectoral front, the growth of Manufacturing sector eased to 7.3% in Q4 of FY26 from 11.8% in same quarter of previous fiscal year. The growth of Agriculture, Livestock, Forestry & Fishing slowed to 3.6% in Q4 of FY26 compared to 3.8% rise in Q4 of FY25.

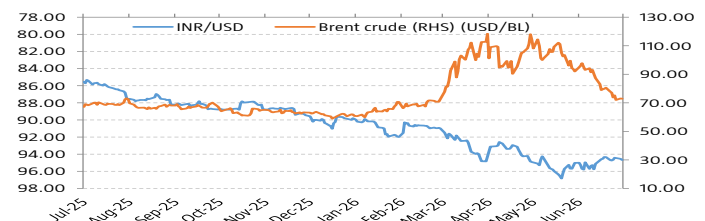

Index of Industrial Production (%)

Index of Industrial Production (IIP) increased to 5.1% in May'26 from 4.9% in Apr'26 marking a steady expansion in factory activity despite a contraction in mining. Manufacturing grew by 5.5% electricity and gas supply, which surged 9.9%. Water supply, sewerage and waste management also rose 5.5%, while mining and quarrying contracted 1.6%.

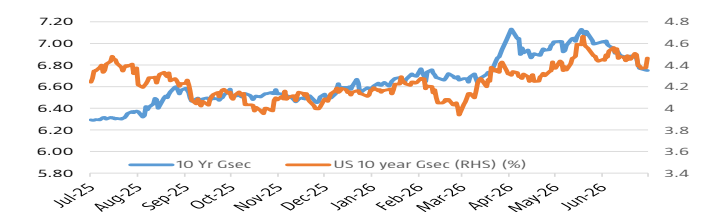

USD INR & Brent Crude Movement

Brent crude oil decreased to US\$ 72.92 in Jun'26 end from US\$ 92.05 in May'26 optimism grew over the resumption of oil flows from the Arab region and U.S. President claimed that a U.S.-Iran interim peace agreement would be signed over soon. The Rupee closed the month on 94.6675 as on Jun'26 against Greenback, reflecting continued volatility in global currency markets.

Interest Rate Movement (%) - India & US

Yield on the 10-Year benchmark paper slightly decreased, closing at 6.75% on Jun'26 vs 7.004% on May'26. This is reflecting market concerns over outflow of Foreign capital and combination of volatile crude oil prices and global headwinds. US 10 year G-Sec closed higher at 4.4652 on Jun'26 vs 4.4355% on May'26.

Note : The data/statistics are given to explain general market trends, it should not be construed as any research report/research recommendation. The sector(s) mentioned are for the purpose of understanding only and the Fund may or may not have any future position in these sector(s).

CANARA ROBECO

Equity Market Review

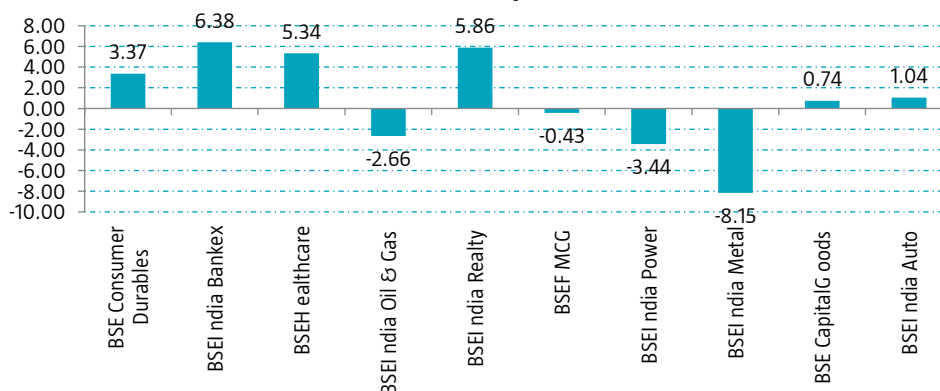

Mr. Shridatta Bhandwalder
Chief Investment Officer –
Equities.

Equity Market Update

- In June 2026, the Nifty 50 increased by 1.35% supported by easing geopolitical tensions and increasing optimism surrounding a potential U.S.–India bilateral trade agreement. The rally was further fuelled by a decline in global crude oil prices following the U.S. President's announcement of a tentative peace deal with Iran, easing investor concerns over inflation and boosting sentiment.
- Foreign Institutional Investors (FIIs) were net sellers in Indian equities to the tune of ₹49341.32 crore.
- Gross Goods and Services Tax (GST) collections in June 2026 stood at Rs. 1.95 trillion, representing a 13.9% rise on a yearly basis and this points towards the growing trajectory of the Indian economy.
- The combined Index of Eight Core Industries (Coal, Crude Oil, Natural Gas, Refinery Products, Fertilizers, Steel, Cement and Electricity) rose by 0.5% YoY in May 2026, following a 1.8% increase in April 2026. Electricity recorded the strongest growth at 8.7%, followed by cement at 8.4%, while output in coal and refinery products declined by 9.3% and 8.7%, respectively.
- Globally, U.S. Markets advanced as a technology-led rebound lifted sentiment, supported by gains in Artificial Intelligence (AI) sector stocks and resilient economic data, even as hawkish signals from the U.S. Federal Reserve and expectations of potential interest rate increases kept investors cautious about the policy outlook. European and Asian equity markets mostly rose as easing Middle East tensions and a U.S.-Iran understanding drove oil prices lower, supporting risk appetite

Market Performance (in %)(Month on Month Basis)

Equity Market Outlook

The world has moved from impact of tariffs to the impact of war and so on... the war at least temporarily is over and the oil prices are back to US\$70 from US\$100 a month back. Our base case has played out. The market comes back from these events and almost always, in hindsight, it looks like it was a good opportunity to deploy in equities. Historical evidence suggest that the markets are at a much higher levels 18-24 months down the line, post the events. We expect the same thing to happen post the current saga of Iran-Israel-US conflict.

While the world remains complex on tariffs and geopolitics, the India- EU deal and US-India (Phase I) trade deal is reducing complexity for exports (INR depreciation likely to help too). We are of the view that the India-US trade deal phase II is likely to get done in few weeks; reducing some overhang on the FII flows and currency. US disengagement with the rest of the world on trade and geopolitics is clearly negative highlight of the FY26. It has bearing on geopolitics (like seen in Venezuela, Iran etc.), trade and global growth.

While the theory of US getting short-changed by its trading partners is debatable, there is little doubt that the country was amongst the biggest beneficiaries of globalization. As the US dominance in the global economy increased, it benefited from global savings moving back to the US to fund its large fiscal and trade deficit at an interest rate of under 2-3% on an average for the past 15-20 years. On the other hand, the benefits of increased local manufacturing that is being perceived as one of the end goals of these tariffs may not be easy to materialize given ecosystem challenges. Global manufacturing supply chains have been established over the past 30-40 years and are almost impossible to move to the US easily without major disruptions and dollar devaluation. This is due to various limiting factors that US suffers from like lack of labor skillset and ecosystem to produce these products at competitive costs. Thus, in the near term, the strategy of stepping back from globalization is likely to hurt US consumers as the cascading effect of these tariffs trickle down in the form of higher inflation, higher real interest rates and lower economic growth. If this scenario of global uncertainty elongates, then US might be in for a negative growth surprise, when high headline inflation leaves limited room for the Federal Reserve (Fed) to cut rate beyond current expectations of 25-50bps in CY26. Although, the AI capex and productivity benefits are compensating for the negative impact on core economy side. AI capex has been to the tune of >US \$ 800bn in FY26, helping the resilience of US economy. Monetization of AI capex is not so easy through basis initial data!

U.S President's policies so far are indicating their inward focus with a multi-polar world and disregard for global trade and defense agreements of previous US establishments. We thus expect uncertainty to prevail both on global growth and capital flows for Emerging markets including India. Euro area might be an eventual beneficiary of this environment as it finally moves towards policies which make it a better economic and geopolitical zone. European leaders have been forced to make serious choices for the first time in last several decades. They may start looking towards East more and India could be beneficiary of the same along with China and Others. Geopolitics remains complex and you might get bouts of escalation and de-escalation periodically in our view (read Venezuela and Iran). China continues to have challenges on growth revival due to ageing population and leverage in households/Real estate, which are structural in our view. Biggest challenge in our worldview remains that, the US is wanting to reduce their trade deficit and no one else is willing to step up including China resulting in negative growth environment globally. Lower US trade deficit means lower earnings globally, since it means impacted exports for the rest of the World.

Indian macro remains best among the large economies, and cyclical growth is normalizing from the last year. The Gross Domestic Product (GDP) print has shown recovery during FY26 to 7.7%. Current Account Deficit running at 1-1.5%. Most domestic macro and micro indicators remain steady (despite elevated oil prices for last 3 months). Given these aspects, despite the global geo-political and economic dark clouds, the domestic equity market remains focused on earnings.

While the structural earning growth has been healthy at >17% CAGR (Compounded Annual Growth Rate) for FY20-24, FY25/26 has moderated to mid-high single digit, which is a cause of concern. Thankfully, earnings have been along the expected line of consensus at high single digit YoY for nifty and 12%YoY for Nifty 500. 4QFY26 earnings have outpaced the expectations. Monetary policy has become very accommodative, both in terms of system liquidity as well as administrative majors around lending. We believe that FY25 / 1HFY26 was a cyclical slowdown driven by factors which have largely reversed and expect earnings to normalize in FY27E/28E to low-mid double digit. Govt capex and consumption boost, credit growth at >15%YoY, surplus liquidity, rural real wages, higher nominal growth rates all are supportive of earnings recovery in FY27E/FY28E.

Our belief on domestic economic up-cycle stems from the fact that the enabling factors are in place,

- 1) Corporate and bank's financials are in best possible shape to drive capex and credit respectively,
- 2) Consumer spending likely to normalize given our demographics and Government push.
- 3) Government is focused on creating enabling environment through reforms and direct fiscal interventions (GST cuts, Income tax cuts and state social welfare schemes add up to 1.5%-2% of GDP)
- 4) Real estate cycle still is in mid cycle with healthy balance sheets.

This makes us constructive on Indian equities with 2-3 years view. We believe that India is in a business cycle / credit growth / earnings cycle through FY26-28E – indicating a healthy earnings cycle from medium term perspective. Though, watch out for war related risk that has emanated lately in the middle east and its impact on energy prices.

Select Consumer discretionary and Financials, Pharma, industrials, Telecom, Hospital, Hotels, Aviation are witnessing a healthy earnings cycle whereas FMCG and IT continue to face headwind. Indian equity market now trades at 19x FY27E / 17x FY28E consensus Nifty earnings – in a cheap valuation zone from medium term perspective – given longevity of earnings growth potential in India. For the broader market, while the last years correction has taken out the froth in mid-caps and small caps, they continue to trade at 10-20% premium to their own historical valuations – indicating that the strong earnings revival is a must for this part of the market to do well. War (if recurs again) remains the biggest risk for the markets, as a prolonged war may keep energy prices elevated for long period of time. Near term risk is from adverse monsoon.

Debt Market Review

Mr. Avnish Jain
Chief Investment Officer –
Fixed Income.

Global Economy Update:

Macro Backdrop:

- ▶ Global growth remains moderate amid persistent geopolitical uncertainties and uneven economic momentum across regions. While the U.S. economy continues to demonstrate resilience, manufacturing activity in Europe and parts of Asia remains subdued, reflecting weaker external demand and ongoing trade frictions.

Geopolitical Risks:

- ▶ Following heightened tensions in the Middle East, a fragile ceasefire has eased immediate concerns regarding disruptions to the Strait of Hormuz.
- ▶ Consequently, fears of a prolonged supply shock have moderated, although geopolitical risks continue to warrant close monitoring given their potential impact on global trade and energy markets.

Oil Price Impact:

- ▶ Crude oil prices have corrected significantly from their recent highs as supply concerns eased, reducing inflationary pressures globally.
- ▶ However, energy markets remain susceptible to renewed geopolitical developments, and commodity price volatility continues to pose upside risks to inflation.

Supply Chain & Trade Disruption:

- Trade policy uncertainty remains elevated, with protectionist measures and strategic tariffs continuing across key sectors such as technology, semiconductors and clean energy.
- Businesses continue to diversify supply chains to improve resilience, although global trade fragmentation remains a medium-term challenge.

Global Inflation Trends:

- In May 2026, headline inflation edged up across major AEs (Advanced Economies) and EMDEs (Emerging Market and Developing Economies).
- Among major AEs, inflation in the US surged to its highest level in three years, driven by a sharp increase in fuel prices.
- In the Euro area also, headline inflation rose led by energy and services.
- In Japan, inflation witnessed an uptick after the expiration of government fuel subsidy, while it remained steady in the UK due to moderation in food inflation which was offset by the rise in transport costs.
- EMDEs, in general, saw rising inflation concerns.
- In Brazil, food and beverages pushed up inflation, whereas in South Africa it was driven by fuel.
- Inflation, however, declined in Russia largely on account of fall in food prices while it remained steady in China.

Purchasing Managers' Index (PMI):

United States:

- The S&P Global US Manufacturing PMI US manufacturing activity slowed in June 2026, though it remained in expansion territory. The S&P Global US Manufacturing PMI declined to 53.9. Meanwhile, the S&P Global US Composite PMI rose to 52.2, and the Services PMI increased to 51.3.

Eurozone:

- The Eurozone economy stabilized, with the HCOB Composite PMI rising to 50.0 in June 2026 from 48.5 in May. This marked an end to two consecutive months of contraction. The Manufacturing PMI stood at 51.3, while the Services PMI edged up to 49.4.

Indian Economy Update:

• Macro Backdrop:

- ▶ India's economy continues to demonstrate resilience, supported by robust domestic demand, government capital expenditure and healthy services sector activity. Domestic fundamentals remain favorable despite global uncertainties.
- ▶ **Inflation & Oil Outlook:** The recent moderation in global crude oil prices has improved India's inflation outlook and reduced pressure on the current account and fiscal position. Nevertheless, food inflation risks associated with weather conditions and global commodity price volatility remain key monitorable.
- ▶ **Government Securities & Capital Flows:** The Government's recent initiatives, including tax-related measures aimed at enhancing the attractiveness of Government Securities for foreign investors, along with RBI's measures to facilitate capital inflows, are expected to support demand for Indian sovereign debt, improve market liquidity and strengthen the domestic fixed income market over the medium term.
- ▶ **External Sector:** India's external sector remains supported by resilient services exports, remittance inflows and adequate foreign exchange reserves. The recent decline in crude oil prices has improved the external outlook, although currency movements will continue to be influenced by global capital flows and U.S. dollar strength.

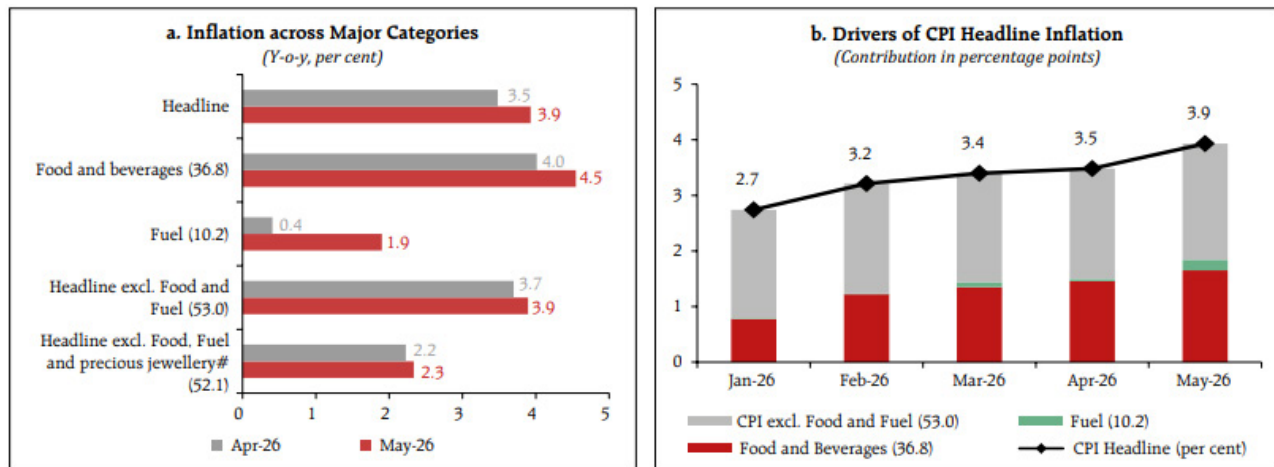

• Purchasing Managers' Index (PMI):

- ▶ India's latest PMI data for June 2026 shows continued expansion, although growth slightly decelerated.
- ▶ The Manufacturing PMI eased to 54.2 (from 55.0), and the Services PMI registered at 57.4.
- ▶ Both sectors remain above the 50.0 threshold, indicating steady economic growth, albeit with slower new order intakes.

Domestic Inflation Trends:

- ▶ Headline CPI (Consumer Price Index) inflation inched up sequentially to 3.9 per cent (y-o-y) in May 2026 from 3.5 per cent in the preceding month driven by broad-based increases in all the three categories - food & beverages, fuel and core components.
- ▶ Rise in inflation of food and beverages was across classes/sub-classes, barring pulses.
- ▶ CPI fuel inflation also increased significantly over the previous month on account of rise in retail prices of petrol, diesel and compressed natural gas.

CPI Inflation (y-o-y%)

CPI: Consumer Price Index.

Notes: 1. Figures in parentheses indicate weights in CPI-C (2024=100).

2. #Precious jewellery includes the items 'gold/diamond/platinum jewellery' and 'silver jewellery'.

Source: National Statistics Office (NSO).

Bond Yields & Spreads:

- ▶ Bond yields fell on plethora of good news i.e., RBI policy pause accompanied by package for stabilizing INR, Zero taxation for FII investments in G-Secs, and Interim peace deal between US-Iran for 60days.
- ▶ Oil price fell to around US\$70/bbl on interim peace deal.
- ▶ US 10Y yields dropped to around 4.35% post peace deal but later rose to around 4.48%-5.0% range on strong US economic data.
- ▶ USD/INR dropped to low of 94.15/\$ post RBI measures and US-Iran peace deal. USD INR rose to close at 94.665/\$ by end June 2026.
- ▶ 10Y G-Sec fell and closed at 6.75% at June end, as RBI Governor pushed back at rate hikes in near term.
- ▶ Liquidity conditions moved towards deficit on advance tax outflows.
- ▶ RBI remained vigilant by providing liquidity through Variable Repo Rate (VRR) auction.
- ▶ Corporate yields dropped with short end of the curve moving sharply down by about 50-75bps as expectation of rate hikes were pushed back.

Outlook:

- ▶ Sentiment has improved considerably post RBI measures and US-Iran peace deal.
- ▶ Lower oil prices helped pushing yield curve down, with shorter term rates falling faster on RBI's dovish tone.
- ▶ USD/INR has come off from lows and is awaiting expected flows from FCNR (B) (Foreign Currency Non-Resident (Bank) Accounts) and ECB (External Commercial Borrowing) measures to get further impetus for appreciation.
- ▶ The new FED chair has decided not to provide forward guidance on policy rates. While the FED chair has voiced concerns on inflation remaining above 2% target, he did not provide any guidance on future rate actions.
- ▶ Markets now expect US FED to hike rates in near term.
- ▶ RBI MPC (Monetary Policy Committee) continues to remain in pause mode. RBI Governor further gave indications that rate hike is not on agenda in the near term.
- ▶ While Inflation forecast has been revised upwards, RBI is likely to wait for more data on monsoon outcome / US-Iran situation. This will likely put August policy in pause mode as well.
- ▶ Market sentiment has improved sharply on positive news in June 2026, and rates have reverted to around pre-war levels.
- ▶ Liquidity is likely to remain in surplus on expected inflows in FCNR (B) deposits and ECB financing.
- ▶ Corporate bond spreads remain wider on tax exemption provided on G-Secs.
- ▶ 10Y yield may trade in 6.65%-6.90% range in the near term.

* On face value of ₹ 10. ● For Daily, Weekly & Monthly IDCW history of Canara Robeco Liquid Fund, Canara Robeco Ultra Short Term Fund & Canara Robeco Savings Fund Visit : www.canararobeco.com. ● The IDCW amount is before tax calculation. ● *Formerly Known as Canara Robeco Bluechip Equity Fund. ● Past performance may or may not be sustained in the future. Pursuant to payment of IDCW, the NAV of the IDCW option of the scheme would fall to the extent of payout and statutory levy (if applicable).

HOW TO READ A FACTSHEET

Fund Manager

An employee of the asset management company who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Minimum Application Amount for Fresh Subscription

This is the minimum investment amount for a new investor in a mutual fund scheme.

Application Amount for Fresh Subscription

This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount

This is the minimum investment amount for an existing investor in a mutual fund scheme.

Yield to Maturity

The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until Maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

SIP

SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs. 500 every 15th of the month in an equity fund for a period of three years.

NAV

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Benchmark

A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10 –Year Gsec.

Exit Load

The charge or fee levied by the mutual fund at the time of redemption or repurchase of units;

Modified Duration

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Standard Deviation

Standard Deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Sharpe Ratio

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta

Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

AUM

AUM or assets under management refers to recent / updated cumulative market value of investments of a scheme managed by the mutual fund.

Holdings

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

GLOSSARY

(as on June 30, 2026)

Total Expense Ratio

The ratio of total of all expenses charged to the investors of the scheme to the total asset under management of the scheme, as may be specified by the Board.

Sharp Ratio

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit or risk.

Beta Ratio

Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

Portfolio Turnover Ratio

It is a measure of how often assets within a fund are churned.

Modified Duration

Modified duration is the price sensitivity and the percentage change in price for a unit changes in yield.

Average Maturity

It is the weighted average of residual maturity of debt securities in a fund portfolio

Portfolio Yield

Weighted Average valuation yield of the assets

Standard Deviation

Standard Deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Risk Free Return

It represents the rate of return an investor could have earned by investing in a security which is believed to have zero investment risk over the specified period of time.

Tracking Error

Tracking error is a measure of how closely is a scheme able to imitate the index to which it is benchmarked. It is the standard deviation of the difference between the scheme and index returns.

R-Squared

It is a statistical measure of how closely the portfolio returns are correlated with its benchmark.

TRI

Total Return Index (TRI) is an index that measures the performance of a group of components by assuming that all cash distributions are reinvested, in addition to tracking the components' price movement. It takes into account all dividends/ interest payments that are generated from the basket of constituents that make up the index in addition to the capital gains and considered as an appropriate measure of performance.
