SIP Performance	21
Riskometer	23

Fund Manager: An employee of an asset management company such as mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Application amount for fresh subscription: This is the minimum investment amount for a new investor entering in a mutual fund scheme.

Minimum Additional Amount: This is the minimum investment amount for an existing investor in a mutual fund scheme.

SIP: Systematic Investment Plan (SIP) is an organized way of investing in Mutual Fund. It helps in building long term wealth through a disciplined approach of investing at pre-defined intervals ranging from daily, weekly, monthly and quarterly.

NAV: Net asset value or NAV is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day and it is the value at which investors enter or exit the mutual fund.

Benchmark: A group of securities, typically a market index, whose performance is used as a standard or benchmark to assess the performance of mutual funds and other investments. A few common benchmarks are the Nifty, Sensex, BSE 200, BSE 500, and 10-year Gsec.

Exit load: When an investor redeems mutual fund units, exit load is charged. At redemption, the exit load is subtracted from the current NAV. For instance if the NAV is Rs. 100 and the exit load is 1%, the investor will receive Rs. 99.

Standard deviation: Standard deviation is statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Sharpe Ratio: The Sharpe Ratio is measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta: Beta is a measure of an investment's volatility vis-à-vis the market. A beta of greater than 1 implies that the security's price will be more volatile than the market. Beta of less than 1 means that the security will be less volatile than the market.

AUM: Assets under management or AUM refers to the recent cumulative market value of investments managed by Mutual fund or any investment firm.

Holdings: The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme: The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile: Mutual funds invest in securities after evaluating their credit worthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their rating becomes the rating profile of the fund. Typically, this is a feature of debt funds.

Macaulay Duration: Macaulay Duration is a measure of how long it takes for the price of a bond to be repaid by its internal cash flows. Macaulay Duration is used only for an instrument with fixed cash flows. Modified Duration as the name suggests, is a modified version of the Macaulay model that accounts for changing interest rates.

Modified Duration: Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Average Maturity: A bond's maturity date indicates the specific future date on which an investor gets his principal back i.e. the borrowed amount is repaid in full. Average Maturity is the weighted average of all the current maturities of the debt securities held in the fund.

Yield to Maturity: The yield to maturity or the YTM is the rate of return anticipated on a bond if held until maturity. It is expressed as an annual rate. The YTM factors in the bond's current market price, par value, couple interest rate and time to maturity

IDCW: Income Distribution cum Capital Withdrawal option or IDCW can be distributed out of investors' capital (Equalization Reserve), which is part of the sale price that represents realized gains.

P/E Ratio: The price-earnings ratio (P/E Ratio) is the relation between a company's share price and earnings per share (EPS). It denotes what the market is willing to pay for a company's profits.

P/BV: The price-to-book ratio compares a company's market value to its book value. The market value of a company is its share price multiplied by the number of outstanding shares.

Dividend Yield: The dividend yield is a financial ratio that shows how much a company pays out in dividends each year relative to its stock price.

Interest Rate Swap (IRS): An interest rate swap is a forward contract in which one stream of future interest payments is exchanged for another based on a specified principal amount. Interest rate swaps usually involve the exchange of a fixed interest rate for a floating rate, or vice versa, to reduce or increase exposure to fluctuations in interest rates.

Potential Risk Class (PRC) Matrix: In reference to Para 6.18 of SEBI Master Circular HO/24/13/11(1)2026-IMD-POD-1/1/7602/2026 on Mutual Funds dated March 20, 2026, all debt schemes will be classified in terms of a Potential Risk Class matrix which consists of parameters based on maximum interest rate risk (measured by Macaulay Duration (MD) of the scheme) and maximum credit risk (measured by Credit Risk Value (CRV) of the scheme).

R Squared: It is a statistical measure of how closely the portfolio returns are correlated **with its benchmark**.

Inception date: Means the allotment date of the respective scheme.

Total Return Index: Total return index calculation consider the actual rate of return of an investment or a pool of investments over a given evaluation period. Total return includes interest, capital gains, IDCW and distributions realized over a given period of time
