BUSINESS UPDATE

by

Akhil Chaturvedi

**Executive Director & CBO,
Motilal Oswal AMC**

Navigating Uncertainty: Staying Focused on Long-Term Fundamentals

The past quarter reaffirmed that geopolitical uncertainty has become an inherent feature of today's investment landscape. Escalating tensions in the Middle East temporarily unsettled global markets, driving higher crude oil prices and renewing concerns around inflation, supply chains, and global growth. However, as tensions gradually eased, markets demonstrated an equally important characteristic the ability to absorb external shocks and refocus on economic fundamentals. The speed with which sentiment recovered suggested that markets were refocusing on long-term structural trends.

Indian equities reflected these developments. Following the escalation of geopolitical tensions in early March 2026, the Nifty 50 corrected **9.8%**, reaching its lowest level on **2 April 2026**. As signs of de-escalation emerged during early April, investor confidence improved rapidly, with the index recovering **8.2%** by **21 April 2026**. Although markets consolidated thereafter and ended the quarter below their pre-escalation level, the recovery underscored that while headlines may influence short-term market sentiment, long-term market performance is influenced by business fundamentals, earnings growth, and disciplined investing. India's domestic growth story remained resilient throughout the quarter. GDP expanded by **7.8% in Q4 FY26**, taking full-year growth to **7.7%**, reaffirming India's position among the world's fastest-growing major economies. Manufacturing activity remained in expansion territory, GST collections remained stable, and government-led infrastructure spending continued to support economic momentum. Corporate India complemented this backdrop with a healthy fourth-quarter earnings season, characterised by resilient revenue growth, improving profitability, healthy order books, and sustained capital expenditure across several sectors.

In this environment, our **QGLP** (Quality, Growth, Longevity, and Price) investment framework continues to guide portfolio construction. Rather than attempting to predict short-term market movements, we remain focused on identifying businesses with durable competitive advantages, strong earnings visibility, disciplined capital allocation, and attractive valuations. This disciplined approach enables us to navigate periods of uncertainty while staying aligned with our investment philosophy and process.

Looking ahead, geopolitical developments and evolving global policy dynamics may continue to create periods of market volatility. Yet, history has consistently shown that economies, fundamentally strong businesses, have generally navigated market cycles. India's structural growth story continues to be supported by favourable macroeconomic fundamentals, improving corporate profitability, and increasing domestic investor participation. As these long-term drivers continue to evolve, we remain committed to staying disciplined, staying invested, and continuing to follow our investment approach over the years ahead.

Business Update: Our expanding presence across mutual funds and alternative investment strategies enables us to further strengthen our research capabilities, investment expertise, and client engagement.

*The QGLP strategy emphasizes investments in companies with a high quality of business and management, strong earnings growth potential, sustainable longevity, and attractive price valuations. While these factors are considered when constructing the portfolio, there is no assurance that this approach will outperform the market or provide positive returns. The strategy is subject to market risks and may experience periods of underperformance.

Thanking You,

Yours Truly,

Akhil Chaturvedi

Motilal Oswal Gold and Silver Passive Fund of Funds[@]

(Formerly known as Motilal Oswal Gold and Silver ETFs Fund of Funds)

(An open ended fund of funds scheme investing in units of gold and silver exchange traded funds)

Investment Objective

The objective of this scheme is to generate returns by investing in units of Gold ETFs and Silver ETFs. However, the performance of the scheme may differ from that of the underlying gold and silver ETFs due to tracking error of the underlying exchange traded funds. There can be no assurance or guarantee that the investment objective of the scheme will be achieved.

HOW TO READ A FACTSHEET

Fund Manager

An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Minimum Application Amount

This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Purchase Amount

This is the minimum investment amount for an existing investor in a mutual fund scheme.

Yield to Maturity

The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

SIP

SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs 500 every 15th of the month in an equity fund for a period of three years.

NAV

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Benchmark

A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-Year Gsec.

Entry Load

A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent.

Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is Rs. 100 and the entry load is 1%, the investor will enter the fund at Rs 101.

Note: SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributors.

Exit Load

Exit load is charged at the time an investor redeems the units of a mutual fund. The entry load is added to the prevailing NAV at the time of redemption. For instance, if the NAV is Rs 100 and the exit load is 1%, the investor will redeem the fund at Rs 99.

Modified Duration

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Standard Deviation

Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Sharpe Ratio

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta

Beta is a measure of an investment's volatility Vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

AUM

AUM or assets under management refers to the recent I updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities.

These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

Total Return Index

Total return index calculation consider the actual rate of return of an investment or a pool of investments over a given evaluation period. Total return includes interest, capital gains, IDCW*s and distributions realized over a given period of time.

CAGR

CAGR (Compound Annual Growth Rate) is the annual rate of return on an investment over a specified period of time, assuming the profits were reinvested over the investment's lifespan.
