Market Overview

Concerns on the capital account of the Balance of payments, alongside emerging pressures on the current account due to the conflict in the Middle east had kept sentiments around the INR quite negative. Given the role of expectations shaping the near-term trajectory on the currency, it was imperative that stabilising measures be taken. In this context, the announcement of debt capital flow incentivisation measures was timely even as the cessation of hostilities and the drop in crude prices provided a fortuitous setting for the domestic financial markets. A near term better demand- supply balance in the debt markets, improvement in the currency outlook as well as Balance of payment dynamics for this fiscal are near term positives alongside lesser downside risks to growth.

Equity

June brought some relief to global and Indian equity markets after a period dominated by Middle East tensions, commodity volatility and uncertainty around the global interest-rate cycle. The de-escalation of the Iran-related conflict helped reverse part of the earlier risk premium in energy and commodities. Crude has corrected sharply from conflict-period highs, with Brent down around 20% month-on month and over 40% from peak and is now back to pre-war levels. Alongside, most other commodities have also retraced from elevated levels. Markets are now pricing Brent at around US\$76/bbl over the next 12 months, suggesting that energy prices may remain in a more manageable range if supply routes normalize and geopolitical risks do not re-escalate. For India, this removes an important overhang: lower oil risk reduces pressure on the current account, inflation expectations and corporate margins. India VIX (measure of equity volatility) consequently has cooled back to pre-war levels.

Exhibit 3: India VIX has cooled back to pre-war levels with receding uncertainty

Source: Bloomberg, SBIFM research

Indian equities recovered modestly in June, but year-to-date performance remains mixed. Nifty and Sensex gained 1.4% and 2.3% month-on-month in June 2026 but stay down for the year by 9% and 10% respectively. Beneath the headline index, the market has been more differentiated, small-caps are up about 7.5% year-to-date, mid-caps are marginally positive, while large-caps are down about 6%. Interestingly, after a long streak of underperformance, June saw India outperforming MSCI Emerging Market Index. Amidst the recent jitters around the AI (artificial intelligence) trade, India has been resilient even as the long-term underperformance continues to be stark, given the dearth of direct plays on the AI ecosystem. For India, the focus will shift on breadth of earnings, domestic demand resilience and traction on market share gains in global exports markets, buoyed by rupee depreciation and trade treaties.

Exhibit 4: India has lagged the AI trade, in turn losing share to fellow EMs

In addition to reduction in crude oil prices, the RBI's measures announced early June are also expected to help address India's external sector challenges. These measures aimed at boosting dollar inflows, include Foreign Currency Non-Resident deposit FCNR(B) hedge absorption, concessional ECB (External Commercial Borrowing) swap, expansion of the Fully Accessible Route (FAR), FPI G-Sec tax exemptions and higher NRI equity limits and together could attract US\$50-60 bn and up to US\$80-100 bn in an optimistic case, potentially moving the balance of payment toward surplus. The rupee has already retraced from Rs.96 to Rs.94.4/US\$ and FPI debt inflows have revived sharply to US\$5.1 bn in June offsetting a US\$3 bn outflow from equities. In addition, at a time when the demand for credit is strong with bank credit growth now touching 18%, the FCNR (B) deposits are an attractive funding source for banks and help address the elevated credit-to-deposit ratios.

The broader global backdrop is also changing. Global export momentum has improved after a subdued 2023-24 period, with global exports expanding by about 7% year-on-year in 2025 and 13% in the first three months of 2026, the strongest pace since 2021, while global manufacturing PMI readings have moved into expansion territory. Defense spending, energy infrastructure, AI-led data centre investment, power generation and possible reconstruction demand in parts of the Middle East could all contribute to a global capital expenditure upcycle. A key implication is that the world economy may be shifting from a disinflation-led easing narrative to one driven by stronger investment demand. However, stronger activity could also imply resurfacing inflationary pressures. The latest May 2026 inflation prints were higher than 2025 averages across several economies, including India, where the latest print was around 3.9% versus an average of about 2.2% in 2025. While the recent softening in crude prices alleviates the need for an immediate rate hike, strong capital demand should support higher inflation and higher interest rates in general.

Overall, the case for a reflationary macro environment is back on the table for the global economy. The outlook for India is turning constructive as well. While we still expect real GDP growth to moderate from about 7.8% in FY26 to around 6.5% in FY27, nominal GDP growth could accelerate to around 12%, aided by higher inflation. This has implications for equities, as rising nominal growth should support revenue growth and potentially earnings growth through operating leverage. Improving external sector stability, resilient domestic demand, strong credit growth and robust exports outlook augur well for macro and earnings. On the flip side, weather-related risks remain with deficient monsoons, lower crop sowing and lower farm incomes being key monitorables.

Exhibit 6: Nominal growth set to pick up

Exhibit 7: Worst of earnings downgrades behind

FactSet, Bloomberg, SBIFM Research

Valuations have become more reasonable after the recent period of macro and earnings uncertainty, and a longer six-quarter correction in Indian equities. India's valuation premium relative to emerging markets has corrected, and equity market sentiment, as measured through our proprietary indicator, has cooled from earlier extremes. In our view, this improves the medium-term return setup. However, higher global rates, elevated primary-market supply and persistent FPI selling mean that market moves are going to be more measured. Our asset allocation framework continues to favour a 60:40 equity-fixed income allocation versus a 50:50 benchmark- preference is for large caps with early-teen return expectations at the index level

The impact of the concessional Forex swap facility announced by the RBI on fresh overseas borrowings through FCNR(B) and ECB's alongside removal of taxes on offshore investors in sovereign securities has had a stabilising influence on the currency markets while also leading to a significant easing in bond yields across the curve. With the cease fire in the Middle east, the near-term inflationary concerns as well as emerging stress on the Balance of payment has been deferred. The near-term impact on account of these measures is reflected in higher net PFI debt flows since the beginning of June. Market sentiments have materially improved over the month enabling significant fund raising by corporates through the bond market since early June.

Removal of Capital Gains and Withholding Tax (WHT) on FPI investment in Government securities- These measures are expected to smoothen the process for inclusion of Indian Government FAR securities in the Bloomberg aggregate Index. The result of index review is expected in the coming weeks. With an anticipated 0.7% weight, estimates of expected flows are to the tune of USD 25Bn. However, on a standalone basis the possibility of flows would be a function of global rates, risk appetite and currency outlook. Given the current global rate cycle and recent INR movements, these estimates could be on the higher side. However as witnessed recently, positioning flows are expected that should at the margin add to demand for sovereign securities.

While the FCNR flows do not attract, SLR demand, the banking system is expected to receive a significant amount of rupee liquidity over the coming months as these flows are swapped with the RBI. To the extent that banking surplus improves, there can be near term demand for sovereign securities, pending eventual deployment, either in credit, credit substitutes or in retirement of other high-cost liabilities. While there could be a corresponding reduction in core liquidity through extinguishing RBI's forward book as well as ongoing leakages in currency, the base of durable liquidity is anticipated to increase over the quarter.

RBI liquidity sterilisation measures, if any could potentially be back ended with OMO sales likely to be the last and least preferred option. However, liquidity absorption measures could be a risk to consider with regards to movement of sovereign and other market yields. This does not appear to be a source of worry at least over the next couple of months

Exhibit 9: Debt FPI flows pick up as INR sentiments turn and near term flows expected

Full Hedging Cost Support for FCNR(B) Deposits (till 30th Sep 2026): Amongst all the measures announced recently, the FCNR facility is anticipated to garner flows to the tune of USD 50bn plus. With the RBI having provided 100% Forex subsidy as well as relaxation of rate caps, the facility could garner significant deposits helped by the leverage facility being offered. Attractive dollar returns (post leverage) alongside no tax implication in India should incentivise banks to garner flows over the coming months.

The immediate impact of FCNR flows would be in taking pressure off the deposit growth challenges in the banking system. The widening gap between credit and deposit growth has led to higher recourse towards wholesale liabilities, both through CD's and Bulk deposits. This has led to significant supply pressure on CD's alongside an already weaker core domestic demand for fixed income assets. The resultant widening of CD spreads in recent times has exceeded levels seen even during previous instances of credit stress in the markets. To the extent that overseas deposits, that do not require CRR and SLR pre-emption substitutes local liabilities over the coming months, there could be a material drop in CD issuances with corresponding tightening of spreads over Treasury bills.

Exhibit 10: Large CD issuances in recent months has kept MM yields/ spreads elevated

Concessional Forex Swap Window for PSU ECBs & OFCB's by Banks (Till End Dec 2026):

The concessional swap facility for PSU ECB 's and borrowings by banks involves swap at a fixed cost of 1.5% and runs until end December 26. Issuers have cumulatively borrowed about USD 2.15 Bn since this was announced. At the same time, spreads on Indian issuers have widened as market anticipates a spate of issuances until the window is available. Apart from the additional cost on account of withholding tax and coupon hedging, issuers may have to weigh the differential cost advantages if any with respect to domestic borrowings. In the context of domestic borrowing costs having come down significantly over the last month, this facility may see lesser inflows on a cumulative basis.

Way Forward

Positive spillovers from the recent RBI/ Gol measures as well as the cessation of hostilities in the middle east have enabled an improvement in market sentiments as well as a material easing in market yields. More importantly, demand supply dynamics in key segments of the fixed income market are expected to remain favourable for the near future. This should influence market movements over the coming months with yields likely to stay supported. Beyond the immediate supportive environment, there remains case for remaining cautious with respect to the medium-term trajectory.

Changing landscape of global rate cycle

Recent inflation prints globally continue to witness broad based increases across most economies. Even as few central banks have already initiated the process of policy normalization/ tightening, market-based measures point to further adjustment over the coming months across most jurisdictions. Domestic inflation trajectory is likely to be shaped by the evolution of the Southwest monsoon, which remains in deficit so far. Even as RBI is likely to remain patient with respect to the process of normalisation, the same has only been delayed and not avoided. With growth risks receding, the central bank would have further leeway to gradually align CPI towards the policy target.

Exhibit 11: Inflation risks emerging globally

Weak domestic demand for Fixed Income assets

The core domestic demand for Fixed Income assets remains weak, with no material enablement of the same. While some of the recent measures would have a short-term stabilisation impact, demand supply gaps across all segments would re-emerge as these transient factors fades out and with a turn of the monetary cycle at some point in the future. A skewed demand balance clearly has been the reason for policy rate transmission to not play out so far as desired. To the extent that this remains unaddressed, wider spreads, episodic volatility and weak rate transmission would continue to recur in fixed income markets periodically.

Capital account of Balance of payments

A durable support for the capital account dynamics on the Balance of Payments would require improvement in both portfolio flows as well as Net FDI. While debt portfolio flows are anticipated to pick up, equity flows continue to remain weak with cumulative YTD outflows of around USD 30 Bn. Given the sensitivity of debt flows to global rate cycle and currency dynamics, seen alongside a narrow rate differential, incentivising offshore debt flows do not seem a sustainable solution to persistent pressures on the capital account.

Muted deposit growth vs credit growth has led to material pressure in the money market funding curve. Currently spreads on AAA Bank CD's over corresponding maturity Treasury bills have remained elevated. The respite from potential deposit accretion through the foreign currency deposit route should enable spreads to remain lower over the coming quarter.

From an investment perspective, the environment points to a continued preference for carry strategies, with cautious and only a tactical positioning on duration. The shorter end of the curve and products positioned there remains attractive in the current context.

- Investment returns that track domestic prices of Silver, subject to tracking error

^Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

All data as of June 30, 2026

Investment Objective:

The scheme will adopt a passive investment strategy. The scheme invests in stocks comprising the Nifty 50 Index in the same proportion as in the Index, with the objective of achieving returns equivalent to Total Returns Index of Nifty 50 Index, by minimising the performance difference between the benchmark index and the scheme. The Total Returns Index is an index that reflects the returns on the index from index gain/loss plus dividend payments by the constituent stocks. However, there is no guarantee or assurance that the investment objective of the scheme will be achieved.

Scheme Details:

Product Labelling:

This product is suitable for investors who are seeking^:

- Short term regular income
- An open-ended Constant Maturity Index Fund tracking CRISIL-IBX Financial Services 3-6 Months Debt Index, subject to tracking error.

^Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

Ms. Ranjana Gupta & Mr. Sankalp Jain will co manage the fund w.e.f 1st July 2026

All data as of June 30, 2026

Investment Objective:

The investment objective of the Scheme is to seek to provide returns that closely correspond to returns provided by SBI Gold ETF. However, there can be no assurance that the investment objective of the Scheme will be realized.

Scheme Details:

Inception Date:

12/09/2011

Fund Managers

Mr. Viral Chhadva
Managing this Fund: March 2026
Total experience: Over 19 Years

Benchmark/Underlying Index:

Price of Physical Gold

ISIN:

INF200K01HA1

Indicative Investment Horizon:

3 years+

Load Structure:

For exit on or before 15 days from the date of allotment – 1%
For exit after 15 days from the date of allotment - Nil

Minimum Investment:

₹5,000/- and in multiples of ₹1

Additional Investment:

₹1,000 & in multiples of ₹1

Options

Growth & IDCW

Plans Available:

Regular & Direct

SIP: The Scheme offers Daily, weekly, Monthly, Quarterly, Semi-Annual and Annual Systematic Investment Plan Daily - Minimum ₹500 & in multiples of ₹1 thereafter for minimum 12 installments

• Weekly - Minimum ₹1,000 & in multiples of ₹1 thereafter for a minimum of 6 installments or minimum ₹500 & in multiples of ₹1 thereafter for a minimum of 12 installments

• Monthly - Minimum ₹1,000 & in multiples of ₹1 thereafter for minimum six months (or) minimum ₹500 & in multiples of ₹1 thereafter for minimum one year

• Quarterly - Minimum ₹1,500 & in multiples of ₹1 thereafter for minimum one year

• Semi Annual - Minimum ₹3,000 & in multiples of ₹1 thereafter for a minimum of 4 installments

• Annual - Minimum ₹5,000 & in multiples of ₹1 thereafter for a minimum of 4 installments

- Past performance may or may not be sustained in future and the same may not necessarily provide the basis for comparison with other investment.
- Period for which scheme's performance has been provided is computed basis last day of the month-end preceding the date of advertisement
- In case, the start/end date of the concerned period is a non-business day, the NAV of the previous date is considered for computation of returns.
- The performance of the schemes is benchmarked to the Total Return variant of the Index.
- Wherever NAV/Benchmark Index value is not available for start/end date for concerned period, the previous business day value of NAV/Benchmark Index is considered for return computation.
- Different plans shall have a different expense structure. Performance for Schemes not having Growth Option has been calculated considering the IDCW Option and is Net of IDCW distribution tax, if any.
- Period for which scheme's performance has been provided is computed basis last day of the month-end preceding the date of advertisement. In case, the start/end date of the concerned period is a non-business day, the NAV of the previous date is considered for computation of returns.

1. Past performance may or may not be sustained in future and the same may not necessarily provide the basis for comparison with other investment.
2. Period for which scheme's performance has been provided is computed basis last day of the month-end preceding the date of advertisement
3. In case, the start/end date of the concerned period is a non-business day, the NAV of the previous date is considered for computation of returns.
4. The performance of the schemes is benchmarked to the Total Return variant of the Index.
5. Wherever NAV/Benchmark Index value is not available for start/end date for concerned period, the previous business day value of NAV/Benchmark Index is considered for return computation.
6. Different plans shall have a different expense structure. Performance for Schemes not having Growth Option has been calculated considering the IDCW Option and is Net of IDCW distribution tax, if any.
7. Period for which scheme's performance has been provided is computed basis last day of the month-end preceding the date of advertisement. In case, the start/end date of the concerned period is a non-business day, the NAV of the previous date is considered for computation of returns.

Benefits of Systematic Investment Plan (SIP) - SIP Performance

The Fund offers flexible and convenient Systematic Investment Plan (SIP) facility. To illustrate the advantages of SIP investments, this is how your investments would have grown if you had invested say 10,000 systematically on the first Business Day of every month over a period of time in the Respective Scheme by using XIRR approach. XIRR helps in calculating return on investments given an initial and final value and a series of cash inflows and outflows with the correct allowance for the time impact of the transactions. Data as on June 30, 2026.

1.Periodical SIP Performances (1Yr, 3Yrs, 5Yrs, 10 Yrs & 15 Yrs) are computed considering SIP Investment on 1st business day of every month.

2."Since Inception SIP" performance are computed considering 1st instalment on allotment date and thereafter on 1st business day of every subsequent month.

1

Do your research:

Compare offerings (ETFs, Index Funds and FoFs) based on expense ratios, tracking error, underlying index, past performance and ease of access (opening of demat account / folio).

2

Open The Right Account

- For ETFs: Open a trading and demat account.
- For index funds and FoFs: Register with a mutual fund platform or the fund house website. Complete KYC and set up bank mandate to open a folio.

3

Invest

- For ETFs: Buy units through your Demat account just like you would purchase a stock.
- For Index Funds and FoFs: You can invest a lump sum or start a SIP to invest regularly.

4

Do your research.

Passive funds do not need constant attention but review occasionally to ensure they still align with your financial goals.

HOW TO READ THE FACTSHEET?

Fund Manager: An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Application Amount for Fresh Subscription: This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount: This is the minimum investment amount for an existing investor in a mutual fund scheme.

SIP: SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests ₹500 every 15th of the month in an equity fund for a period of three years.

NAV: The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Benchmark: A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty 50, BSE Sensex, BSE 200, BSE 500, 10-Year Gsec.

Entry Load: A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is ₹100 and the entry load is 1%, the investor will enter the fund at ₹101.

Note: SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor.

Exit Load: Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is ₹100 and the exit load is 1%, the redemption price would be ₹99 Per Unit.

AUM: AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings: The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme: The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Tracking Error: Measure that indicates how closely the portfolio return tracks the benchmark return. Tracking error is the standard deviation of the difference of returns between a portfolio and the benchmark over a specified holding period.

IDCW: IDCW stands for 'Income Distribution cum Capital Withdrawal option'. The amounts can be distributed out of investors' capital (Equalization Reserve), which is part of the sale price that represents realized gains.

Note: For details on IDCW, please refer notice cum addendum dated March 27, 2021. In line with SEBI Circular no. SEBI/HO/IMD/DF3/CIR/P/2020/194 dated October 05, 2020, nomenclature of Dividend plans / options has been rephrased w.e.f. April 01, 2021.
