TAURUS LARGE CAP FUND

(An open-ended equity scheme predominantly investing in large cap stocks)

Invest in Market Leaders
Exposure to well-established, financially strong large-cap companies.

Stability with Growth
Large caps offer resilience across market cycles and potential for sustainable performance.

Wealth Creation Over Time
Potential for long-term wealth creation through the power of compounding.

Strong Fundamentals
Backed by sound business models, robust earnings and strong corporate governance.

INVESTMENT OBJECTIVE

The investment objective is to provide investors long-term capital appreciation. Investments shall be primarily in Equity and Equity related instruments of large cap companies. There is no assurance that the investment objective of the Scheme will be achieved.

EXPLORE THE POTENTIAL OF INDIA'S LEADING BUSINESSES THROUGH Taurus LargeCap Fund

Partner with strength.
Invest for the future

Mutual Fund investments are subject to market risks, read all scheme related documents carefully.

GLOSSARY

Sharpe Ratio

Sharpe Ratio is a risk to reward ratio, it measures portfolio returns generated in excess to the investment in risk-free asset, for per unit of total risk taken. While, positive Sharpe ratio indicates, portfolio compensating investors with excess returns (over risk-free rate) for the commensurate risk taken; negative Sharpe ratio indicates, investors are better off investing in risk-free assets.

Beta

Beta (β) of a portfolio is a number indicating the relation between portfolio returns with that of the market index i.e. it measures the volatility, or systematic risk, of a portfolio in comparison to the market as a whole.

Standard Deviation

A statistical measure that defines expected volatility/risk associated with a portfolio. This explains the variation/deviation from the average returns delivered by the portfolio. A higher standard deviation means higher volatility (risk) and a lower standard deviation means lower volatility.

Risk Free Return

The theoretical rate of return of an investment with safest (zero risk) investment in a country.

Total Expense Ratio

Total expenses charged to scheme for the month expressed as a percentage to average monthly net assets.

Tracking Error

Tracking error indicates how closely the portfolio return is tracking the benchmark Index return. It measures the deviation between portfolio return and benchmark index return. A lower tracking error indicates portfolio closely tracking benchmark index and higher tracking error indicates portfolio returns with higher deviation from benchmark index returns.

Portfolio Turnover Ratio

Portfolio Turnover Ratio is the percentage of a fund's holdings that have changed in a given year. This ratio measures the fund's trading activity, which is computed by taking the lesser of purchases or sales and dividing by average monthly net assets.

HOW TO READ A FACTSHEET

Fund Manager

An employee of an asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

SIP

SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works like a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs 500 every 15th of the month in an equity fund for a period of three years.

NAV

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of

every business day. It is the value at which the investor enters or exits the mutual fund. Benchmark A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the NIFTY, SENSEX, BSE200, BSE500, 10-Year G-sec.

Dividend / IDCW

"Dividend" / "IDCW" means income distributed on Mutual Fund Units from the distributable surplus, which may include a portion of the investor's capital {i.e. part of Sale Price (viz. price paid by the investor for purchase of Units) representing retained realized gains (equalization reserve) in the Scheme books}.

Exit Load

Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceed at net value of NAV less Exit Load. For instance, if the NAV is ₹100 and the exit load is 1%, the investor will receive ₹99.

Modified Duration

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Standard Deviation

Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Sharpe Ratio

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta Ratio (Portfolio Beta)

Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

Average portfolio PE (Average P/E)

It is the price to earnings ratio of the stocks calculated for the entire portfolio on a weighted average basis. Average portfolio price to book ratio (Average P/BV) It is price to book value of the stocks calculated for the entire portfolio on a weighted average basis.

Average portfolio dividend yield (Average Dividend Yield)

It is the dividend yield of the stocks calculated for the entire portfolio on a weighted average basis.

Net Equity

Net equity level is the net equity exposure percentage adjusted for any derivative positions in stocks or index for hedging or rebalancing purposes.

AUM

AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories

Rating Profile

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

INVESTMENT FRAMEWORKS

Over the last year, we have developed and charged forward with a new investment philosophy: Non-dogmatic value investing with a contrarian bias.

This new investment approach stands for the strength, resilience, and unwavering determination that are characteristically associated with our eponymous sun sign. It is a multidisciplinary approach that draws on a latticework of mental models across a plethora of different fields. It means that we invest with a focus on the true value of a business without sticking to a single method/framework and often go against the crowd.

We use first principles thinking to break down complex problems to their basic elements, allowing us to understand the core value drivers rather than relying on the colloquial wisdom of "this always happens" or "that never works".

We use probabilistic thinking to evaluate the likelihood of different outcomes rather than assuming certainty. Lastly adding mental models, this combination allows us to understand complex market dynamics and identify undervalued opportunities that others might overlook, leading to potentially higher returns by capitalizing on market inefficiencies

Types of Stocks We Have

Tactical Investing

"We practice Tactical Investing, dynamically adjusting positions based on momentum driven strategies, capitulation indexing and macroeconomic trend analysis to seize short-term opportunities while maintaining a long-term investment focus."

Contrarian Investing

"We employ Contrarian Investing, seizing opportunities in under-appreciated assets capitalizing on market mispricing for potential reversals and subsequent gains."

MACROECONOMIC UPDATES

Global Growth

Global economic activity remained uncertain amid the West Asia conflict, though the America-Iran peace MoU triggered a sharp correction in crude oil prices. Despite intermittent tensions, oil prices stayed below recent peaks. However, macroeconomic uncertainty persisted, driving heightened volatility across global financial markets.

The IMF has cut its 2026 global growth forecast by 20 bps, citing risks from the Middle East conflict, including higher commodity prices, elevated inflation, and tighter financial conditions. Its baseline scenario assumes the conflict remains contained and supply disruptions ease by mid-2026, with global growth projected at 3.1% in 2026 and 3.2% in 2027. These estimates remain below the recent 3.4% pace and the long-term average of 3.7%. Under adverse scenarios, global growth could weaken further to 2.5% or even 2.0%, alongside higher inflation, with emerging markets expected to face the most severe impact.

India's Growth

India's growth momentum has remained resilient despite elevated global uncertainty, supported by strong domestic consumption and continued public investment. However, the West Asia conflict created significant risks in the first two months of the fiscal year, as crude averaged nearly US\$110/bbl and fertilizer and other commodity prices rose sharply, threatening both growth and inflation. The peace MoU between America and Iran, followed by lower crude and fertilizer prices, has eased some pressure.

Recent policy measures should further support external inflows and financial stability. RBI's decision to bear the full FCNR hedging cost may encourage sizeable deposit inflows, while the concessional 1.5% borrowing window for PSU ECBs and the opening of government bonds have already attracted over US\$2.5bn in June. Overall, inflows may exceed US\$50–60bn over the next year, supporting the INR. India may also benefit from future portfolio reallocation into equities.

MONETARY CONDITIONS

Global financial conditions have tightened as renewed inflation risks from the West Asia conflict have pushed bond yields higher and made major central banks more cautious. Expectations of rate cuts have moderated, raising the prospect of interest rates staying higher for longer, especially if geopolitical tensions persist. Although the peace agreement has reduced some immediate risks, central banks remain wary of lingering inflationary pressures.

The US Federal Reserve, under new Chair Kevin Warsh, struck a notably hawkish tone in its latest policy communication, reinforcing concerns over prolonged tight monetary conditions. Against this backdrop, we expect the Reserve Bank of India to raise policy rates once during FY27. While the sharp correction in crude prices should help ease inflation pressures, adverse base effects and a weak monsoon are likely to keep CPI inflation elevated for much of the year, limiting the scope for monetary easing.

PRIVATE SECTOR CAPEX

Private sector capex in India remains weak and uneven. A government survey estimates private-sector capital expenditure on new assets to decline by 16.5% to ₹9.55 lakh crore in FY27, from ₹11.43 lakh crore in FY26. While investment by large-listed conglomerates is gaining traction in sunrise sectors such as green hydrogen, battery storage, data centers, renewables and hospitality, broader capex remains cautious.

Unlisted firms, which account for about 85% of private investment spending, continue to hold back due to weak exports, import competition, adequate existing capacity and subdued demand. A broader capex revival will require stronger consumption and higher capacity utilization.

Source: 360 One Capital

MONTHLY INDICATORS

- **Manufacturing PMI and Services PMI:** India's manufacturing PMI increased to 55.0 in May from 54.7 in April, possibly reflecting precautionary stockpiling amid the unresolved Middle East conflict. Manufacturing activity remained expansionary, with output growth accelerating during the month. Purchasing activity and stocks of finished goods also rose at a faster pace, indicating stronger inventory

accumulation. New order growth continued to be supported mainly by domestic demand, while export order growth moderated. On the price front, input cost inflation eased slightly compared with the previous month, while output price inflation slowed more sharply. This suggests that manufacturers may be facing some pressure on margins, as firms appear to have limited ability to fully pass on cost increases to customers.

India's services PMI: rose to 59.8 in May from 58.8 in April, marking the strongest expansion since November 2025. Growth was supported by stronger demand for freight, digital solutions, e-commerce, entertainment, and IT services, which boosted new business activity. Firms responded by increasing output and continuing to add employees. External demand for India-provided services also improved, rebounding from April's sharp decline.

MONTHLY INDICATORS

Meanwhile, input cost inflation eased, reducing pressure on selling prices.

- **GST Collections:** Total GST collections in May, reflecting April business activity, stood at Rs 1.94 lakh crore, compared with Rs 1.88 lakh crore a year earlier, registering 3.2% YoY growth. Imports led the increase, with gross import IGST rising 19.0% YoY to Rs 59,600 crore. Net GST collections stood at Rs 1.67 lakh crore, up 3.3% YoY. Adjusted for the one-time GST payment by the telecom sector in the previous year, GST collections increased by a stronger 9.0% YoY in May.
- **E-way Bill Generation:** E-way bill generation remained robust in May at 13.61 crore, up from 13.34 crore in April and 12.27 crore a year earlier, registering 11.0% YoY growth. Despite the West Asia conflict, strong e-way bill

activity indicates resilient business momentum, better GST compliance, and continued economic expansion.

- **Inflation:** India's CPI inflation rose to 3.93% in May from 3.48% in April, mainly driven by higher food inflation, which increased to 4.6% from 4.0%. Transport inflation rose to 1.8%, reflecting higher retail fuel prices, while restaurants and accommodation inflation climbed to 5.8% due to rising input costs, including LPG. Most other categories remained contained. Core inflation rose to 3.9%, while core excluding gold and silver stood at 2.5%.
- **Industrial Production:** April industrial production grew 4.9% under the new IIP series with base year 2022-23. Growth was primarily driven by the manufacturing sector, which expanded

by 6.2% YoY. Electricity and gas supply rose 4.9%, while sewerage and waste management increased 6.6% YoY. However, mining and quarrying remained a drag, contracting 5.1% YoY during the month.

- **Trade Balance:** India's exports rose 18.0% YoY to US\$45.2bn in May, supported mainly by petroleum products, while imports increased 20.6% YoY to US\$73.4bn, driven by a sharp rise in crude imports. This resulted in a monthly trade deficit of US\$28.2bn. Services exports grew 13.2% YoY to US\$36.7bn, while services imports rose 14.1% YoY to US\$19.1bn. The services surplus stood at US\$17.7bn, compared with US\$15.8bn a year earlier.

Source: 360 One Capital

INTER-BANK LIQUIDITY AND RBI

The RBI's June bi-monthly policy kept all key rates unchanged and retained the neutral policy stance. However, the policy tone was distinctly hawkish, reflecting a volatile external environment that has increased the upside risks to inflation while weighing on the growth outlook. The prolonged West Asia conflict and the resulting surge in crude prices, with Indian crude averaging nearly US\$110/bbl during April-May, have materially altered the macro backdrop and brought the possibility of policy rate hikes back into focus. However, following the US-Iran peace deal and the sharp correction in crude prices, some of the RBI's macro projections may be revised.

At the same time, the RBI reiterated its commitment to maintaining adequate system liquidity to meet the

	YoY Growth
Bank Credit	16.5%
Port Cargo Traffic	0.6%
E-way Bill	11.0%
GST Collection	3.2%

productive needs of the economy. Its FY27 CPI inflation projection stands at 5.1%, compared with our estimate of 5.3%, while core inflation is projected at 4.7%. However, core inflation excluding precious metals is likely to remain lower, suggesting contained demand-side pressures. The RBI's FY27 GDP growth forecast of 6.6% is above our estimate of 6.3%. Measures to attract foreign capital, including concessional swap rates for PSU ECBs and full hedging for FCNR(B) deposits, could be significant.

Source: 360 One Capital

EXTERNAL SECTOR

India's external trade deficit widened month-on-month in May, mainly driven by higher crude imports. Merchandise exports rose 18.0% YoY to US\$45.2bn, supported largely by petroleum products, while imports increased 20.6% YoY to US\$73.4bn, reflecting a sharp rise in crude imports. As a result, the merchandise trade deficit stood at US\$28.2bn for the month.

Services trade continued to provide support to the external account. Services exports grew 13.2% YoY to US\$36.7bn in May, while services imports rose 14.1% YoY to US\$19.1bn. Consequently, the services surplus stood at US\$17.7bn, higher than US\$15.8bn recorded a year earlier. Overall, while the goods trade deficit widened due to elevated crude imports, the resilient services surplus helped partly offset pressure on India's external balance.

Source: 360 One Capital

CURRENCY

The INR weakened further in CY2026, following sharp depreciation in CY2025, mainly due to external sector pressures and geopolitical tensions linked to the West Asia conflict. So far in CY2026, the INR has depreciated around 4.4% against the USD. However, the currency strengthened after the RBI's June 5 policy measures to attract foreign exchange inflows. These included opening G-Sec investments, allowing PSUs to access ECB borrowings at a concessional ceiling of 1.5%, and introducing a fully hedged swap facility for FCNR(B) deposits. These steps could attract USD 50–60bn of capital inflows.

The INR also gained support from the Iran-US peace agreement and lower crude prices. With the REER estimated around 12.0% below its long-term average, the INR appears more competitive. Near-term inflows may support 2.0%–3.0% appreciation, though medium-term depreciation is likely to remain mild.

SECTORAL OUTLOOK

CHEMICALS SECTOR

The global chemicals sector continues to face a challenging operating environment, with recovery in the EU27 remaining elusive amid weak demand, elevated energy costs, intense global competition and renewed geopolitical uncertainty linked to West Asia. Chemical production contracted 3.2% YoY, while capacity utilization remains well below historical averages, reflecting persistent structural weakness due to geopolitical tensions. Although business confidence has improved from the lows seen in late 2025, it remains in negative territory, indicating that the industry is witnessing only a fragile stabilization rather than a sustained recovery as supply chain got disrupted.

For Indian chemical manufacturers, the outlook remains mixed as Europe continues to be a key export market. Production declined across almost all chemical segments in 1QCY26, with cosmetics

being the only segment to register positive growth. Exports from the EU also weakened sharply, particularly to the US, highlighting subdued global demand and continued pressure on the industry's trade environment. While a potential easing in crude oil and feedstock prices could provide some cost relief, the recent geopolitical disruptions are likely to delay any meaningful recovery in export demand.

Overall, until demand in key export markets improves and capacity utilization normalizes, growth is likely to remain constrained despite some improvement in input costs. Indian chemical companies may continue to rely on domestic demand to offset weakness in overseas markets, while sustained recovery will depend on improving global industrial activity and stabilization in geopolitical conditions.

Sources: Internal Research

INFRASTRUCTURE SECTOR

The infrastructure sector continues to face a mixed operating environment, with healthy order book growth offset by weak project awards and execution challenges. The aggregate order book expanded 15.6% YoY, providing healthy revenue visibility over the medium term. However, fresh order inflows declined 3.4% YoY during the quarter, reflecting continued weakness in road project awards. The slowdown has persisted for several quarters, delaying execution for road-focused contractors despite a robust bid pipeline.

Pressure remains concentrated in the road EPC segment, where higher input costs, aggressive bidding and slower project awards continue to weigh on profitability. To mitigate these challenges, infrastructure companies are increasingly diversifying into railways, metro, urban infrastructure,

transmission, renewable energy, tunnelling and mining projects, reducing dependence on roads and creating a more balanced order mix. A recovery in ordering activity across these segments is expected to support growth over the coming quarters.

Sector performance remained weak in 4QFY26, with revenue declining 4.1% YoY, EBITDA falling 18.1% YoY and PAT declining 11.9% YoY due to margin pressure due to higher RM prices specially Metals and oil & gas, lower execution, labor shortages and delayed approvals. While the near-term outlook remains cautious, diversified infrastructure players are better positioned to navigate the current environment. Over the longer term, sustained government infrastructure spending and an expected recovery in project awarding should support sector growth.

Sources: Internal Research

OIL & GAS SECTOR

The oil & gas sector outlook has improved as global crude supply conditions gradually normalize following easing geopolitical tensions in West Asia. Although crude prices have corrected with the Strait of Hormuz remaining partially operational and alternative supply routes supporting global flows, refining fundamentals continue to remain strong. Product spreads for gasoline, diesel and aviation fuel remain well above historical levels, while refinery exports are yet to recover to pre-conflict levels. Continued supply disruptions, lower inventories and resilient demand are expected to keep gross refining margins (GRMs) elevated over the next 12–18 months.

The sector is also likely to benefit from an expected recovery in fuel demand as refinery operations normalize and countries rebuild strategic petroleum reserves. While Brent crude is expected to stabilize within a narrower range,

product spreads are likely to remain firm, supporting refining profitability. Temporary inventory losses may weigh on near-term earnings due to the recent correction in crude prices, but improving retail margins and sustained strength in refining economics should offset these pressures over time.

Overall, the medium-term outlook for the sector remains constructive. Gradual recovery in global refinery utilization, constrained spare production capacity and ongoing disruptions to refining infrastructure are expected to support healthy refining margins despite lower crude prices. While geopolitical uncertainties remain a key risk, the improving supply-demand balance and resilient downstream fundamentals should provide a favorable operating environment for the sector over the next one to two years.

Sources: Internal Research

TELECOM SECTOR

Indian telecom sector outlook remains constructive, supported by a consolidated industry structure, rising data consumption, subscriber premiumization and improving free cash flow generation. With the heavy 5G investment phase largely behind the sector, capital intensity is expected to moderate, creating scope for stronger cash flows and healthier balance sheets. Although near-term ARPU growth has been affected by seasonal factors and softer roaming usage, operators remain well placed to benefit from prepaid-to-postpaid upgrades, premium customer additions and a gradual shift towards more usage-linked pricing.

Growth opportunities are also expanding beyond core mobile services. Home broadband, enterprise connectivity, data centers, cloud and digital financial services are emerging as important medium-term revenue drivers. The sector's strategic focus is increasingly shifting from subscriber acquisition to monetization, customer quality and adjacent digital businesses.

Overall, the sector appears well positioned for steady earnings growth, supported by rising ARPU potential, lower capex intensity, stronger free cash flow and disciplined capital allocation. Regulatory risks remain a key monitorable, but the medium-term outlook remains favorable.

Fund Manager Comments : We have chosen to remain well diversified across emerging sectors. Companies with better visibility for growth have been preferred. As the fund remains sector-agnostic, we reiterate our optimistic view on select stock opportunities over sector movements.

Aggregate amount invested by the AMC and its Key Employees in Taurus Mid Cap Fund is **Rs. 137.12** Lakhs which is 1.10% of the AUM.

Total Amount held in Taurus Mid Cap Fund as per SEBI Circular relating to Alignment of interest of Key Employees ('Designated Employees') of Asset Management Companies ('AMCs') with the unitholder of the Mutual Fund Schemes (as on 30th June 2026)

Scheme Name	Amount Invested (In Lakhs)
Taurus Mid Cap Fund (G)	Rs. 42.70

1. Note: Mr. Anuj Kapil has been appointed as the Fund Manager for Taurus Mid Cap Fund w.e.f November 15, 2023 (Notice cum Addendum dated 9th November 2023). Earlier, since 23rd May 2022 Mr. Hardik Shah was Fund Manager for this scheme.

2. Note: Mr. Hemanshu Srivastava has been appointed as the Co-Fund Manager for Taurus Mid Cap Fund w.e.f July 18, 2024 (Notice cum Addendum dated 17th July 2024).

Why Taurus Mid Cap Fund?

- An opportunity to the investors to build wealth in the longer term by investing in quality midcap stocks which subject to associated risks, may result in capital appreciation.
- Intends to build a diversified portfolio across sectors in low number of companies aiming to increase the return potential with an acceptable risk profile.
- A bottom-up approach is followed to identify quality companies at attractive valuations.
- It also allocates its assets in the small cap space tactically to take exposure to the wealth creating opportunities in this space.

Fund Manager Comments : Scheme comprises stocks of businesses with low debt, stronger pricing power than their competitors, sustainable cash flows and good corporate governance, bought at discounted prices to our estimate of their intrinsic values. Occasionally, we may take very small positions in certain special situations.

Aggregate amount invested by the AMC and its Key Employees in Taurus ELSS Tax Saver Fund is **Rs. 208.50** Lakhs which is 2.96% of the AUM.

Total Amount held in Taurus ELSS Tax Saver Fund as per SEBI Circular relating to Alignment of interest of Key Employees ('Designated Employees') of Asset Management Companies ('AMCs') with the unitholder of the Mutual Fund Schemes (as on 30th June 2026)

Scheme Name	Amount Invested (In Lakhs)
Taurus ELSS Tax Saver Fund (G)	Rs. 28.65

Note: Mr. Anuj Kapil has been appointed as the Fund Manager for Taurus ELSS Tax Saver w.e.f August 07, 2023 (Notice cum Addendum dated 8th August 2023). Earlier, since 2nd May 2022 Mr. Ramneek Kundra was Fund Manager for this scheme.

Why Taurus ELSS Tax Saver Fund?

Qualifies for Tax Exemption under Section 80C of Income Tax Act, 1961

A 3-year lock-in period helps investors maintain longer term horizon

Market cap Agnostic

Invest in companies with attractive unit economics and risk/reward across market capitalizations

Long term Capital Appreciation

Hold a portfolio of companies that, in our opinion, have lower terminal value risk than an average company over long term

Balanced Portfolio Construction

Non dogmatic value investing with context: Compounders, Cyclicals, Special Situations and Asset Plays

Rational Approach

Buy, hold and sell businesses more objectively than try to be contrarian or with consensus

Investing in Businesses and Managements with long term track record

Reduces the risk of investing in companies that could potentially be poorly governed

Basket Approach in Select Sectors

Take positions across companies within undervalued sectors to reduce company specific risks and still actively take larger positions in companies with great long term track record of capital allocation and good growth prospects, as per our research

Scheme Name	Amount Invested (In Lakhs)
Taurus Banking & Financial Services Fund (G)	Rs. 3.75

Note: Mr. Anuj Kapil has been appointed as the Fund Manager for Taurus Banking & Financial Services Fund w.e.f June 13, 2023 (Notice cum Addendum dated 15th June 2023). Earlier, since 1st November 2022 Mr. Hardik Shah was Fund Manager for this scheme.

Why Taurus Banking and Financial Services Fund?

- Since the banking system is the backbone of any growing economy, we are optimistic on the Indian BFSI Space.
- Post the reforms by the current government, Indian BFSI space is structurally in a sweet spot for long term growth.
- Positioned to benefit from improving financial inclusion across the country and capture the potential upside because of credit growth in the economy.
- Investment is done in the BFSI space where the companies as selected are well managed, adequately capitalized, resilient to liquidity shortage and have a potential to benefit from credit growth in the economy.

Fund Manager Comments : Overall, we have maintained a positive bias on Private Banks with decent capitalization coupled with prospects of improving credit demand. In NBFC sector, the exposure has been tilted to players who have clear resilience to liquidity shortage and a sustained growth prospect.

Fund Manager Comments : Infrastructure remains an important pillar of India growth story. However, we continue to align our portfolio with a strong balance sheet coupled with reasonable valuations. We believe that we are at the cusp of a capex cycle which will last for the coming 3-4 years. Hence the portfolio is more tilted towards companies which will benefit out of the capex cycle.

Aggregate amount invested by the AMC and its Key Employees in Taurus Infrastructure Fund is Rs. **32.62** Lakhs which is 3.67% of the AUM.

Total Amount held in Taurus Infrastructure Fund as per SEBI Circular relating to Alignment of interest of Key Employees ('Designated Employees') of Asset Management Companies ('AMCs') with the unitholder of the Mutual Fund Schemes (as on 30th June 2026)

Scheme Name	Amount Invested (In Lakhs)
Taurus Infrastructure Fund (G)	Rs. 5.77

Note: Mr. Anuj Kapil has been appointed as the Fund Manager for Taurus Infrastructure Fund w.e.f November 15, 2023 (Notice cum Addendum dated 9th November 2023). Earlier, since 13th June 2023 Mr. Hardik Shah was Fund Manager for this scheme.

Why Taurus Infrastructure Fund ?

- For any growing economy, investments in infrastructure are the key to future economic growth. Recognizing that good infrastructure is an enabler for economic growth, the incumbent government is focused on improving India's infrastructure by undertaking public spending as well as incentivizing private capex.
- Dedicated infrastructure Fund that can invest in various sub-sectors which are likely to outperform in the on-going capex driven cycle.
- To provide investors with opportunities for potential long-term growth through investments in a diversified basket of stocks in sectors which according to us, directly or indirectly aid in contributing to India's Infrastructure growth story.
- The Infrastructure space can be a broad gamut to look at, however we prefer to invest in select high growth sub sectors. We desire to stick to a range of 30-32 stocks that may provide an optimal trade-off between concentration risk and returns.

Why Taurus Nifty 50 Index Fund ?

- Great for investors who want to invest in equities but do not want to expose yourself to the risks associated with actively managed equity Funds
- Great for investors who want to benefit from India's economic growth but do not have time/ability to research individual stocks or processes of active mutual Funds
- Equities are volatile in short term, but an index Fund averages out gains over longer term, leading to more sustainable returns
- Less than one-fifth the management fee of an actively managed equity mutual Fund
- Actively managed equity mutual Funds are prone to human errors and not beating Nifty50 index while charging higher fee whereas our Index Fund has no such risk as it mimics the index performance while charging lower fee

"If you like spending six to eight hours per week working on investments, do it. If you don't, then dollar-cost average into index Funds." ~Warren Buffett.

Fund Manager Comments : The index Fund continues to track the performance of its benchmark indices Nifty. The Fund portfolio consists of the stocks in the same weight as they are in the Nifty Index. The strategy of the investment is to mirror the index return by minimizing the tracking error with its benchmark.
